

URAdapt

**Managing Water at the Urban-Rural Interface: The key to
climate change resilient**

Dynamics of urban-rural interaction in relation to water and waste water

Tadesse Sinshaw

Addis, 29 May 2012

Table of content

- Theoretical framework
- Study area
- Challenges and opportunities on interaction
 - ❖ Land use change
 - ❖ Water resource development
 - ❖ Waste management
 - ❖ Regional integration
- Conclusion & Recommendations

Theoretical framework

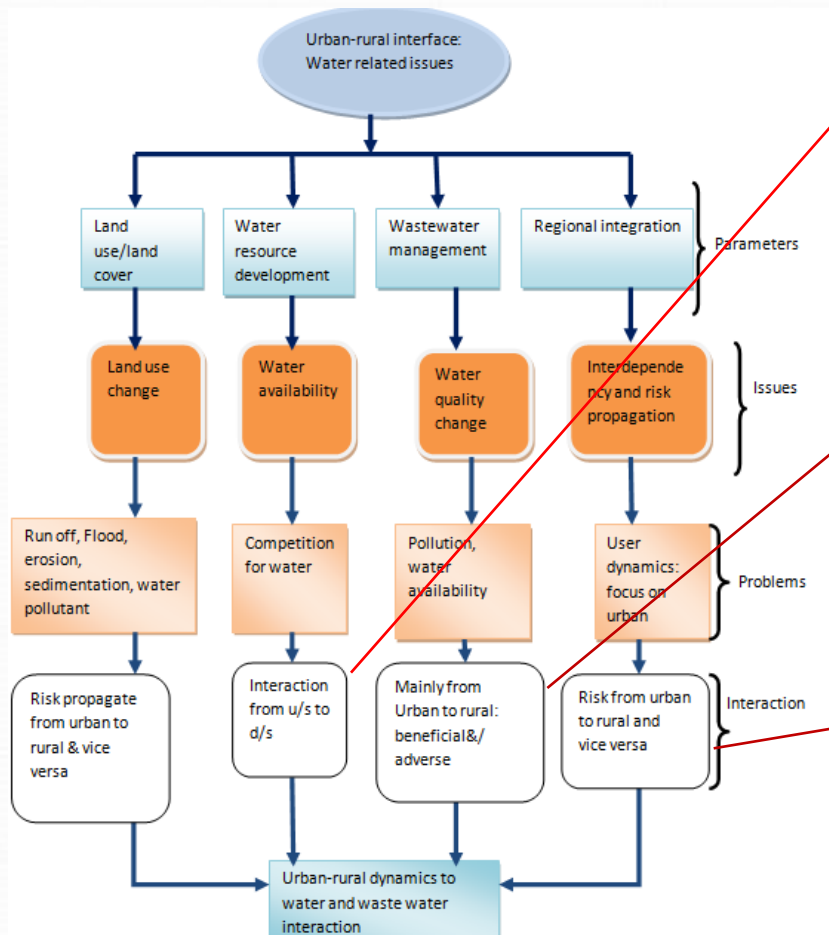

- Urban-rural: geographically interconnected areas
- Economic, social and political interaction
- Urban-surrounding rural areas

| Rural | Urban | Interaction |
|-------------------------------|--|---|
| Livelihood: Agriculture | Labour market, trade | Migration |
| Natural capital: Key asset | Housing: key economical resource | Informal settlement |
| Favourable environment | Reliance on cash | Urban encroachment Competition for water |

Theoretical framework

- Hydrological linkage is a main feature in neighbourhood
- Regional cooperation: sustainability->regional planning based on wider perspective
- Issue: Managing the water resource with out regional cooperation

Theoretical framework

- U/s abstractions rise->decrease flow to D/s users
- Depends on urban location

Urban waste->peri urban & rural
Agricultural waste->urban
Beneficial or harmful interaction

Interdependency on natural resource
Common interests->competitive

Study area

Population:

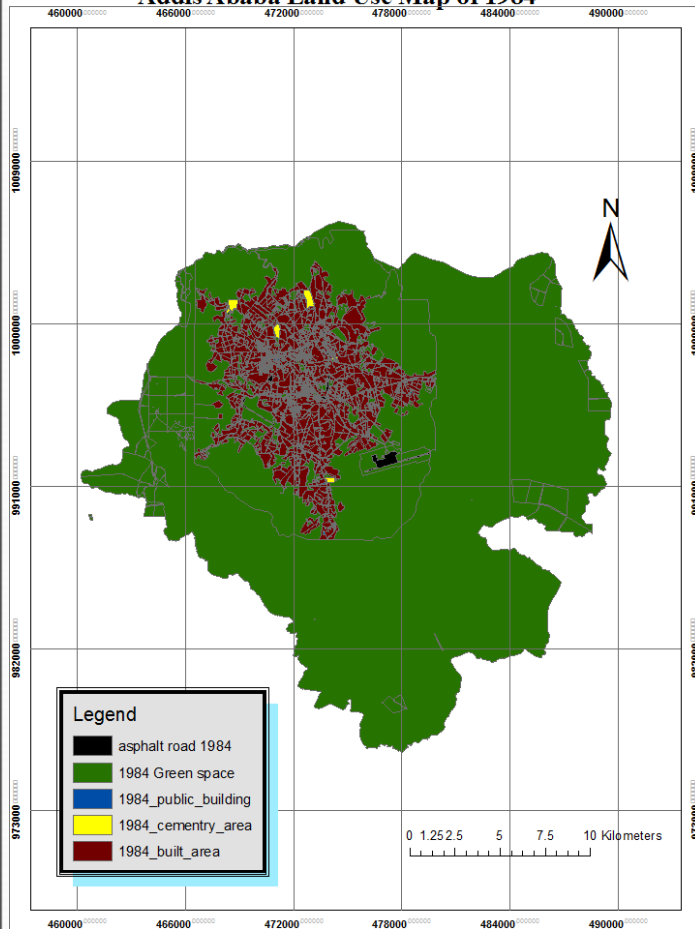

AA: above 3 million

Special zone: 1 million

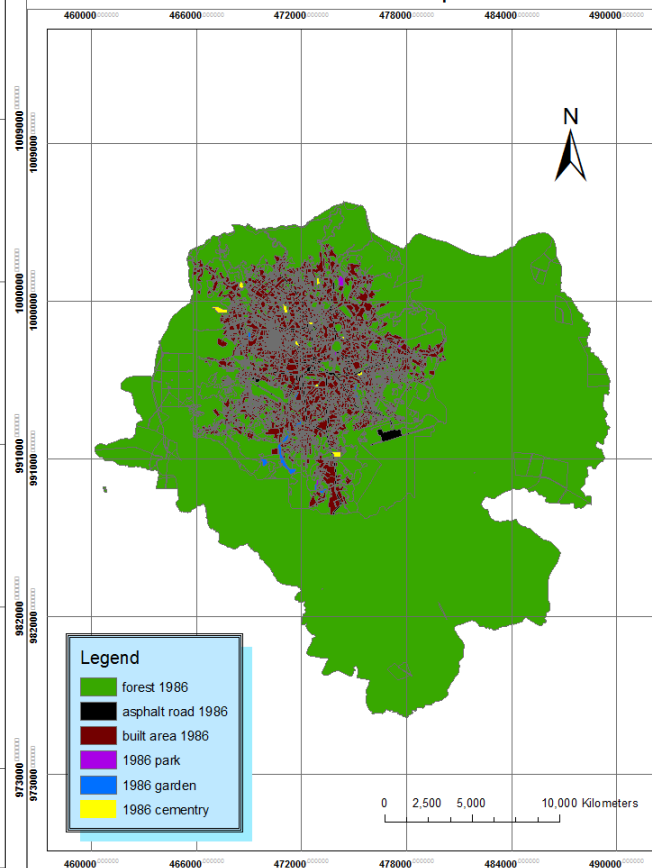

A. Land use changes: Addis Ababa

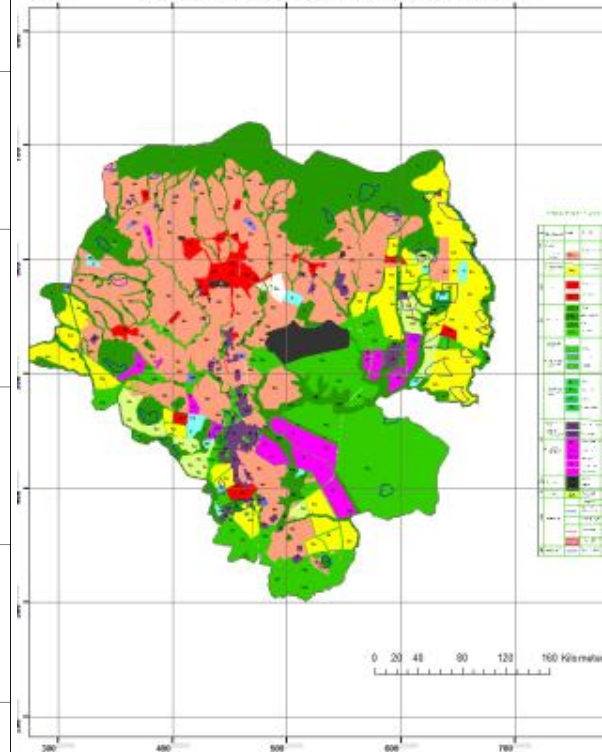

Addis Ababa Land Use Map of 1984

Addis Ababa Land Use Map of 1986

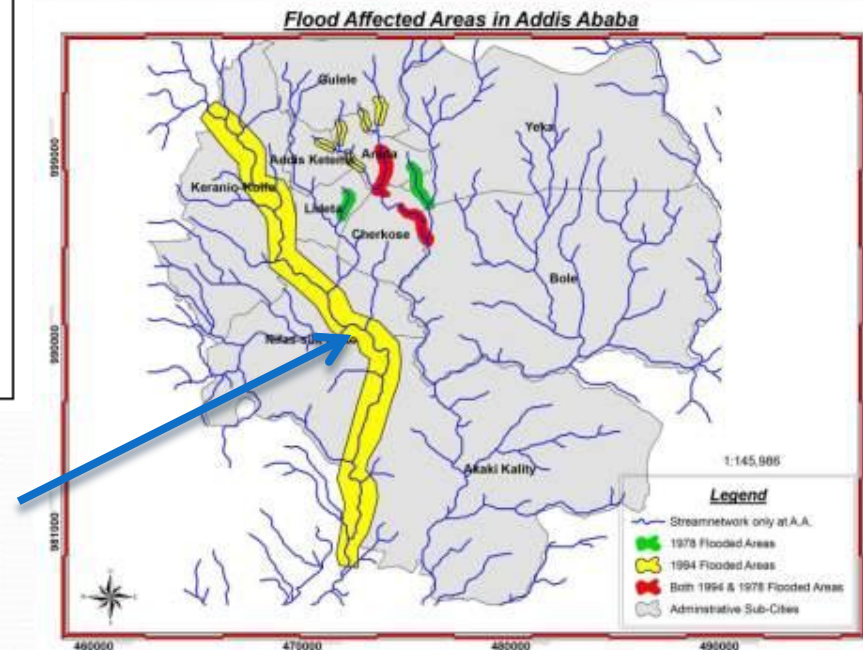

Addis Ababa Land use map of 2002

Land use change of AA

| Year | Total Area (km ²) | Land use Type | | | | | |
|------|-------------------------------|----------------------------|--------------------------|--------------------------|---------------------------|--------------------------------|--------------------------------------|
| | | Impervious Area | | | Pervious Area | | |
| | | Asphalt (km ²) | Paved (km ²) | Built (km ²) | Forest (km ²) | Agriculture (km ²) | Cemetery and park (km ²) |
| 1984 | 517.87 | 4.72 | 11.16 | 60.15 | 139.023 | 301.7 | 1.09 |
| 1986 | 517.87 | 10.734 | 12.864 | 80.173 | 98.062 | 314.67 | 1.38 |
| 2002 | 517.87 | 27.704 | 57.358 | 212.733 | 68.717 | 142.87 | 8.43 |

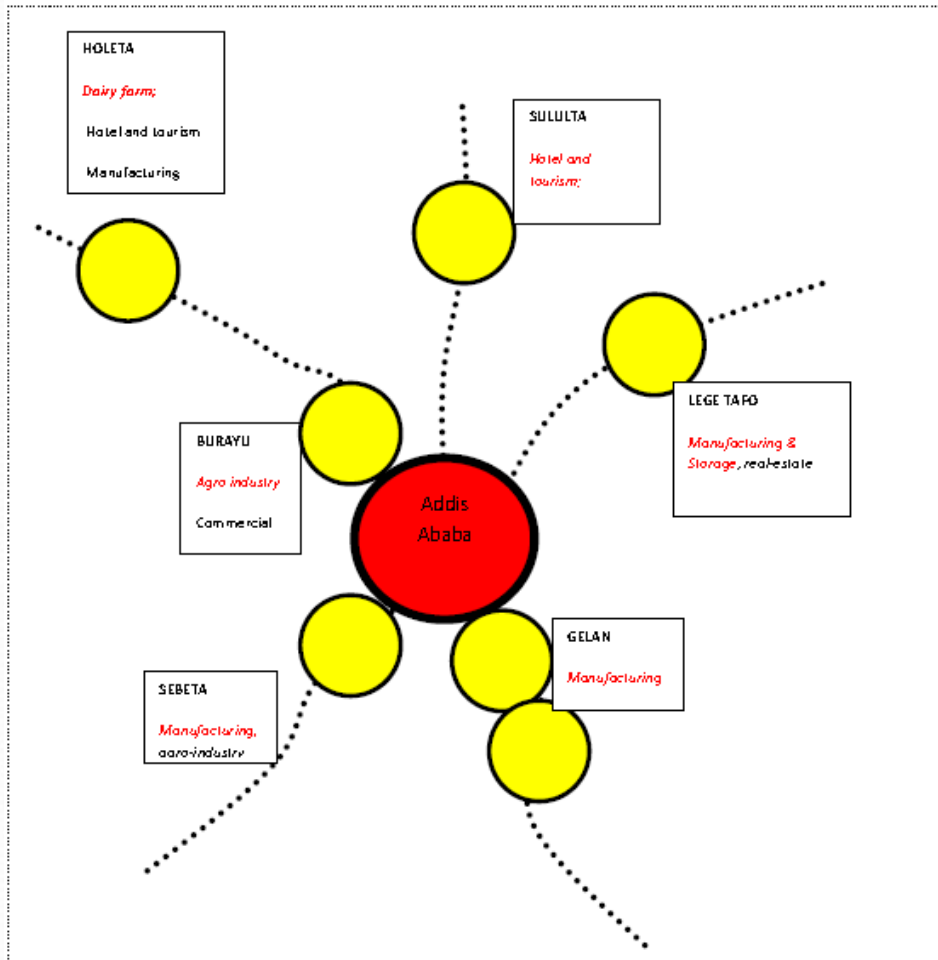

- Run off potential increased
1984: 0.28 2002: 0.45
- 50 % agricultural land is urbanized

Increased downstream flooding and inundation area

Land use changes: Special zone

Urbanization

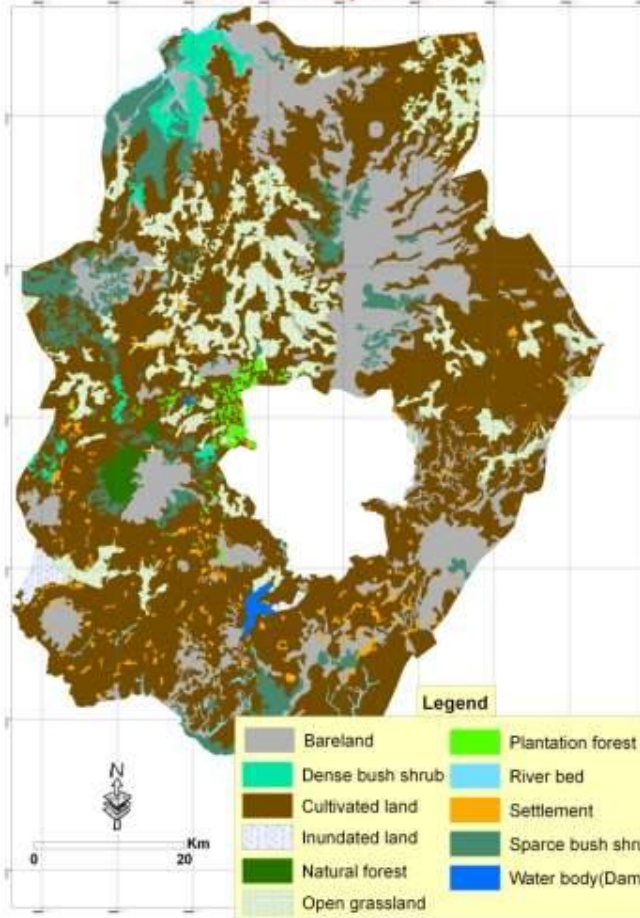

Land use types

- Southern towns: Heavy industrial growth
- Northern :Agro industries and recreation

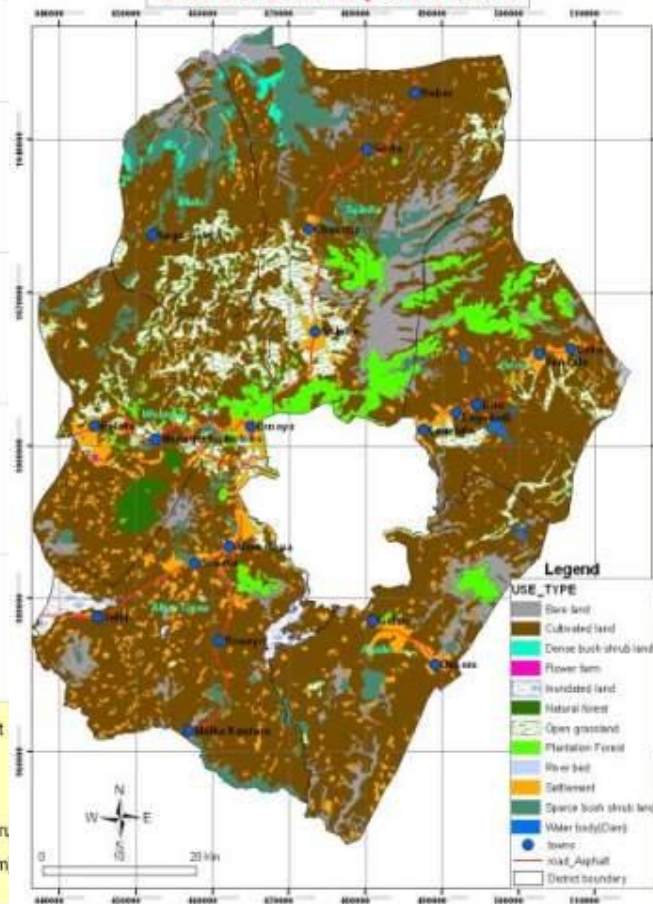

Land use changes: special zone

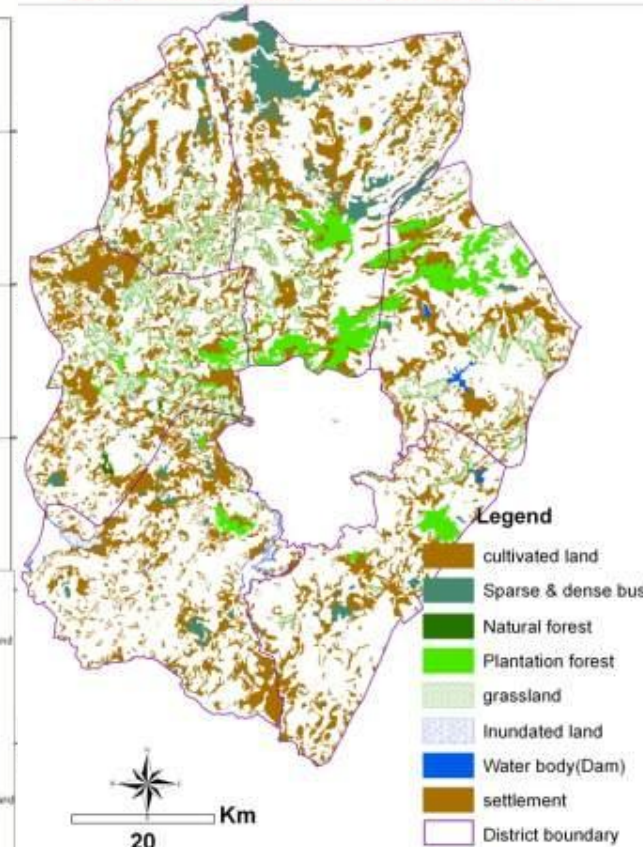

Land Use/Cover Map of 1960s

Land Use/Cover Map of OSZ, 2008

Land use/cover exist in 2008 but not in 1960

Land use changes: special zone

| Land use/cover type | Year Area_ha | | | Gross change in ha | | | Change in percentage | | |
|-----------------------|--------------|--------|--------|--------------------|------------|------------|----------------------|---------------|---------------|
| | 1960 | 1980 | 2008 | 1980s-1960s | 2008-1980s | 2008-1960s | 1980s to 1960s | 2008 to 1980s | 2008 to 1960s |
| Cultivated land | 275644 | 296987 | 315557 | 21343 | 18570 | 39913 | 7.74 | 6.25 | 14.47 |
| Grass land | 53130 | 50200 | 34311 | -2930 | -15889 | -18819 | -5.83 | -31.65 | -54.84 |
| water reservoir | 1387 | 1919 | 937 | 532 | -982 | -450 | 38.35 | -104.8 | -48 |
| Inundated land | 2482 | 2570 | 4862 | 88 | 2292 | 2380 | 3.54 | 89.18 | 48.95 |
| Dense bush and shrub | 8576 | 7495 | 1905 | -1081 | -5590 | -6671 | -14.42 | -293.43 | -350.18 |
| Sparse bush and shrub | 32329 | 28125 | 29415 | -4204 | 1290 | -2914 | -14.94 | 4.58 | -9.9 |
| Settlement | 10160 | 12631 | 40842 | 2471 | 28211 | 30682 | 24.32 | 223.34 | 301.98 |
| Natural forest | 3293 | 3333 | 3648 | 40 | 315 | 355 | 1.21 | 9.45 | 10.78 |
| Plantation forest | 3801 | 10294 | 23629 | 6493 | 13335 | 19828 | 170.82 | 129.54 | 521.65 |
| Bareland | 103144 | 83687 | 41323 | -19457 | -42364 | -61821 | -23.24 | -102.51 | -149.6 |
| River bed | 3867 | 547 | 1152 | -3320 | 605 | -2715 | -606.94 | 110.6 | -235.67 |
| Flower farm | NA | NA | 283 | NA | NA | 283 | NA | NA | NA |

In a nutshell, the dynamics of interaction due to land use change

- AA urbanization-> increased frequency and extent of downstream floods (Akaki Wereda)
- Consequence in :
 - Loss of property & life
 - Cost of Adaption
- Increase land use change from the special zone intensive cultivation->Hydrological regime change
 - Sedimentation to Gefersa, Legedadi and Dire
 - Water quality from pesticides, fertilizers , etc

B. Water resource development

Major water users & abstractions

Addis Ababa ->

Commercial, domestic, industrial

Existing supply: 280,000 m³/day

Required->479,000 m³/day

40% deficit->

- Legedadi reservoir->165,000 m³/day
- Gefersa reservoir->30,000 m³/day
- Akaki well field & intercity wells->85,358 m³ /day

Water resource development

Surrounding areas

Drinking water supply

Population: 1 million

Rural coverage: 60%

Urban coverage: 56%

- Deep wells
- Shallow wells
- Springs

Yield varies from 5 to 25 l/s

| Type of scheme | Total |
|-------------------|-------|
| Deep well | 75 |
| Shallow well | 83 |
| Spring gravity | 12 |
| Pumped spring | 6 |
| Spring on spor | 96 |
| Pumped spring | 288 |
| Surface(Legedadi) | 1 |
| Total | 561 |

Water resource development

Water supply coverage

| No | Name of Wereda | 2011 population | 2011 WS pop | % coverage |
|----|----------------|-----------------|----------------|------------|
| 1 | Mullo | 47,217 | 27,858 | 59 |
| 2 | Sululta | 137,637 | 92,079 | 67 |
| 3 | Bereke | 115,270 | 78,776 | 68 |
| 4 | Akaki | 82,138 | 43,533 | 53 |
| 5 | Sebeta Awas | 142,344 | 62,631 | 44 |
| 6 | Welmara | 94,417 | 64,676 | 69 |
| | Total | 619,023 | 369,553 | 60 |

| No | Name of Town | 2011 population | 2011 WS pop | % coverage |
|----|-------------------|-----------------|----------------|------------|
| 1 | Chanco | 18,730 | 10,670 | 57 |
| 2 | Sululta | 29,727 | 20,400 | 68 |
| 3 | Legetafo legedadi | 18,892 | 5,800 | 30 |
| 4 | Sandafa Bereke | 25,901 | 17,300 | 66 |
| 5 | Galan | 20,687 | 15,500 | 74 |
| 6 | Dukum | 28,917 | 15,200 | 52 |
| 7 | Sabata | 102,791 | 50,951 | 49 |
| 8 | Holeta | 40,097 | 26,310 | 65 |
| 9 | Burayu | 103,090 | 47,110 | 45 |
| | Total | 388,832 | 209,241 | 56 |

Extraction

- PCD based on national standard
- Rural 15 l/day
- Towns 20 l/day

Total extraction= 17000 m³/day

Private industries and commercial centres?????

Water resource development

Agricultural water use: smallholders, private investors

- 315,517 ha cultivated land
- 95% smallholder farmers subsistence
- Traditional agricultural systems
- Most use their own farm seed: lower water productivity
- Fertilizer->blanket application->with out soil fertility test, extent of yield, crop & climate specific
- 312ha flower farm

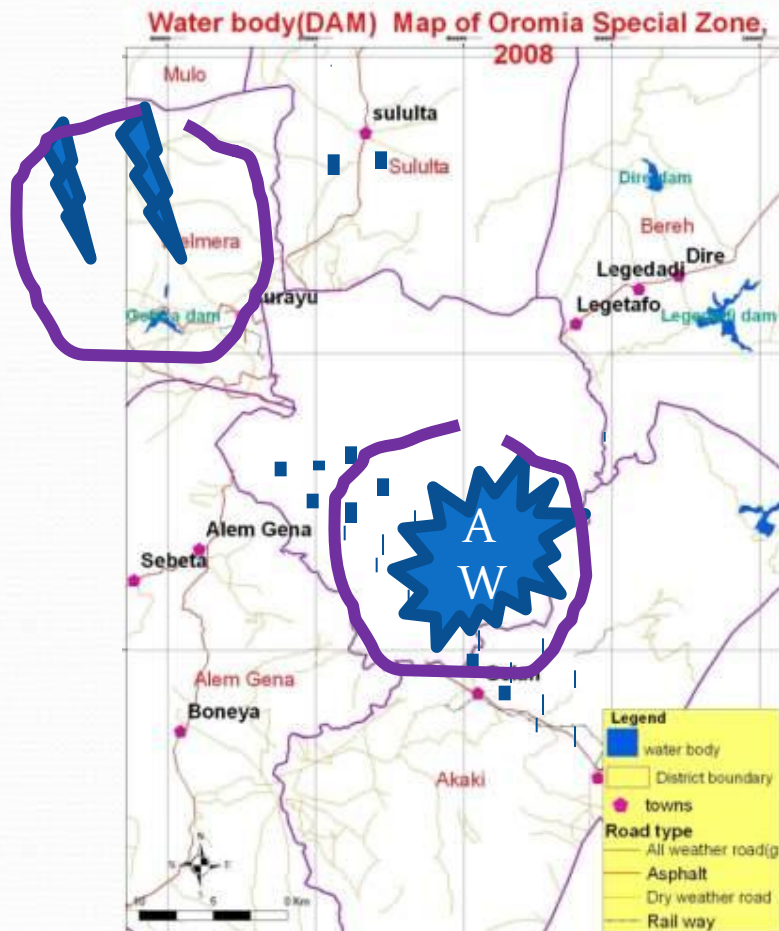

Water resource development

Livestock Watering

- Abundant livestock population
- estimated 792087
- Source of drinking: rivers, springs, ponds and swamps
- Intermittent rivers/ponds: **dry season shortage**

Water use maps

- Growing Industrial and commercial water demand in Akaki competes with Akaki well field
- Ground water based interaction

Different Sources of Water for Different Purposes – Rural and Urban (Percentage)

| Source of water | Drinking | | Cooking | | Cleaning | | Livestock | |
|------------------|----------|-------|---------|-------|----------|-------|-----------|-------|
| | Rural | Urban | Rural | Urban | Rural | Urban | Rural | Urban |
| River | 29.1 | 15.1 | 30.9 | 14.9 | 45.2 | 24.5 | 59.4 | 22.3 |
| Pond/Lake | 12.4 | 3 | 12.3 | 3.2 | 14 | 4.1 | 16 | 4.6 |
| Hand dug well | 17.6 | 9 | 17.6 | 10.1 | 15.7 | 11.4 | 12.6 | 2.9 |
| Developed spring | 22 | 2.7 | 22 | 2.6 | 14.2 | 2.4 | 6.2 | 2.9 |
| Piped water | 18.8 | 70.2 | 17.4 | 69.2 | 10.9 | 57.6 | 6.2 | 2 |
| Not using | 0 | 0 | 0 | 0 | 0 | 0 | 0.5 | 57.7 |
| Open surface | 41.5 | 18.1 | 43.2 | 18.1 | 59.2 | 28.6 | 74.4 | 26.9 |

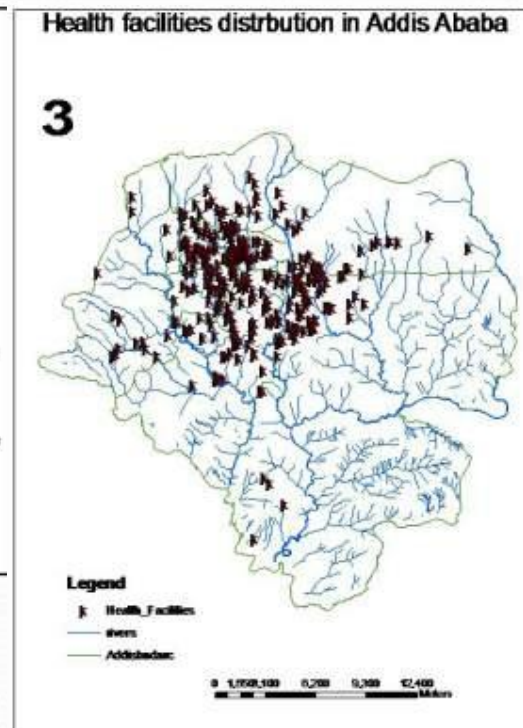

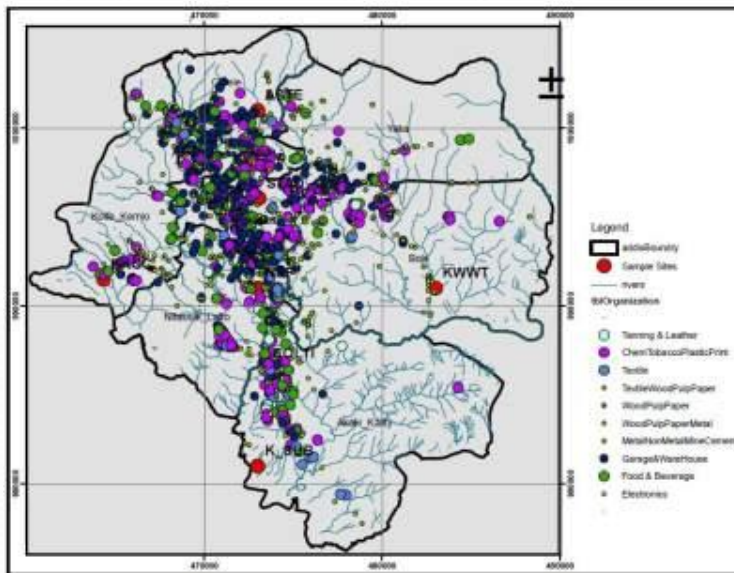

In summary

- Increased water demand for common water resources
- Increased water development from the same water sources
- Increasing water consumption by the communing people from the surrounding and vice versa interaction

Likely competition for the common resources will rise

C. Waste water management

- Domestic, industrial, commercial and agricultural wastes

- Open space disposal
- Addis: 7% sewage collection and disposal
- 90 % industries with out treatment plant
- BOD and total coliform examination results exceeds the WHO environmental standards

Waste water management

- Agricultural wastes: Fertilizer and pesticides
Nitrates->health risk->sometimes cancer
- Pesticides: can contaminate water by volatilization, leaking, and runoff.
- Floriculture activities ->different types of waste ->dangerous to health

Waste

Risk

- Irrigation practiced with out ensuring the suitability of water for crop and health
- Flood spread pollutant to farm land and grazing land->livestock health risk

Opportunities

- Water demand rise->reallocate to urban->limit water for agriculture
- Waste water->Readily available water
->Reduce fertilizer cost

D. Regional integration

- Regional planning focused on administrative boundary, not hydrological boundaries
- Undesirable effect from urban to rural and vice versa as stated above
- Addis entirely depend on Special zone on water resources
- The water resource is a common source
- Formal agreement not established between AA & SZ
- Some instances: AAWSA and Gerefersa forest plantation

```
graph TD; A[Oromiya N/R/State & the City Government of Addis Ababa] --> B[Steering Committee]; B --> C[Technical Committee]; B --> D[Joint Regional Planning Coordination Office]; B --> E[Special Zone of Oromiya and AA City Manager Office]; C <--> D; D <--> E; D --> F[Consultant];

Planning
Coordination Office**

**Special Zone of
Oromiya and AA
City Manager
Office**

Consultant

Conclusion

- AA->Rapid urbanization->Flood risk propagation
- SZ-Cultivation increased severely->sedimentation to AA Reservoirs
- Dependency of SZ domestic Ground on ground water->little interaction with AA supplies.
- Akaki well field vs Akaki Wereda Ground water competition
- Welmera Wereda flora farms vs Gefersa resevoir
- Poor urban and aricultural waste Collection & diposal

Recommendations

- Promoting positive two-way interactions reciprocal relations between rural and urban areas
 - promote a more balanced use of natural resources such as water
 - Recycling urban wastewater for rural agriculture, after ensuring that its quality is suitable for crops and human health
- ❖ *Act on the governance mechanisms*
